

# LTC open actions

- Maximum bump amplitude at 450 GeV -> YP
  - Presented at the LHCCWG. Additional follow-up with VELO aperture in IR8.
- Transparency of the spectrometer polarity for LHCb, triggered at Chamonix 2006 by WH -> WH and/or YP??
- Possibility for using the injection optics for Pb collisions triggered at Chamonix 2006 -> JJ (already mentioned at LOC meeting 28/08/06)
- Measuring the energy spread via transverse beam profile monitors, triggered at the 33. LCC 20.11.2002 -> ??

# LHCCWG open actions

- Circumference Difference Between the 2 LHC Rings -> Clarify whether the non-reproducibility is the same or different for the two apertures, LHCCWG#8 -> LB+MG+GA??
- Beam-based measurement & correction of transfer function for separation dipoles using orbit feedback, in particular if D2 field is known, LHCCWG#10, LHCCWG#11 -> ??
- Study expected effect of triplet-quad roll error and related measurement procedures, LHCCWG#10-> ??
- Global view of expected imperfections (beta beating etc.), LHCCWG#5 -> JPK+ET+MG
- Essentially already dealt with when Rogelio made the presentation on the correction of beta-beating. Update could be made...
