

LCU meeting
23 / 10 / 2009

IR8 Squeeze: Nominal and 3.5 TeV

Emanuele Liface

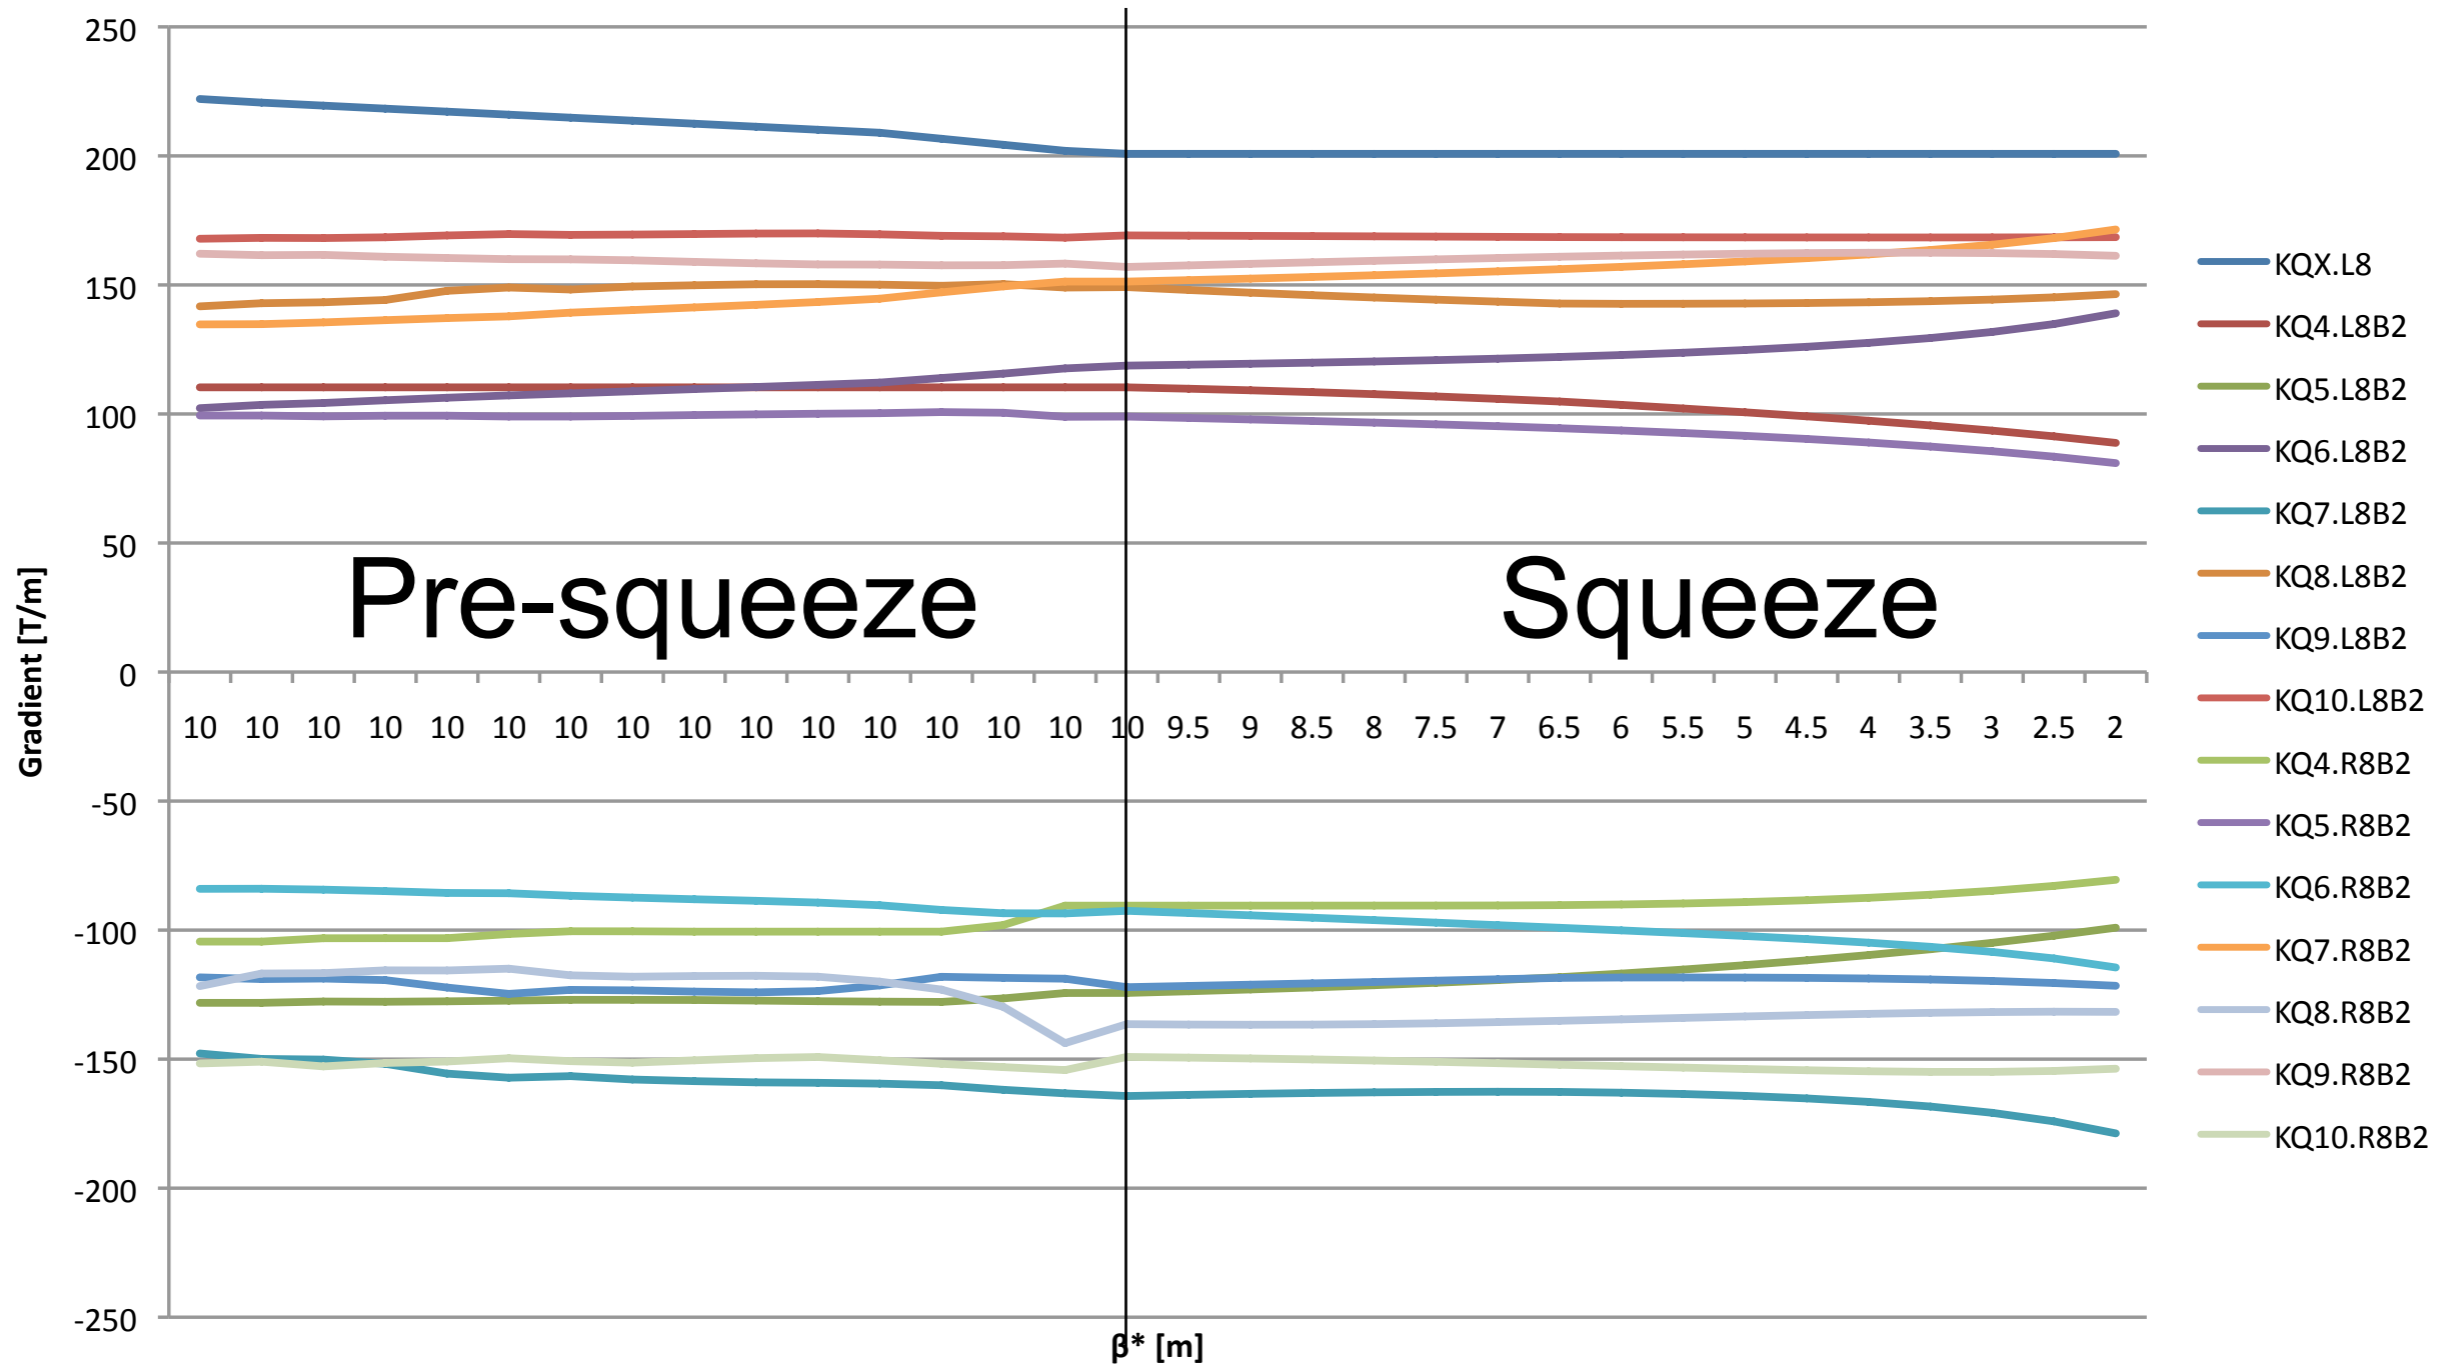

Nominal Squeeze

Beam 1 Q1 - Q10

Nominal Squeeze

Beam 2 Q1 - Q10

Aperture parameters at 7 TeV

Aperture parameters at 7 TeV

β^* from 10m to 2m

Aperture parameters at 7 TeV

β^* from 10m to 2m

Required half separation: 100 μ rad ($\sim 5\sigma$)

Aperture parameters at 7 TeV

β^* from 10m to 2m

Required half separation: 100 μ rad ($\sim 5\sigma$)

LHCb spectrometer angle: $\pm 135\mu$ rad

Aperture parameters at 7 TeV

β^* from 10m to 2m

Required half separation: $100\mu\text{rad}$ ($\sim 5\sigma$)

LHCb spectrometer angle: $\pm 135\mu\text{rad}$

External crossing angle: $310\mu\text{rad}$ (why not 235?)

Aperture parameters at 7 TeV

β^* from 10m to 2m

Required half separation: $100\mu\text{rad}$ ($\sim 5\sigma$)

LHCb spectrometer angle: $\pm 135\mu\text{rad}$

External crossing angle: $310\mu\text{rad}$ (why not 235 ?)

Final crossing angle from $445\mu\text{rad}$ to $175\mu\text{rad}$

7 TeV $\beta^* = 2$ m spectrometer with “bad” polarity

Aperture parameters at 3.5 TeV

Aperture parameters at 3.5 TeV

β^* from 10m to 2m (?)

Aperture parameters at 3.5 TeV

β^* from 10m to 2m (?)

Required half separation: 130 μ rad ($\sim 5\sigma$)

Aperture parameters at 3.5 TeV

β^* from 10m to 2m (?)

Required half separation: $130\mu\text{rad}$ ($\sim 5\sigma$)

LHCb spectrometer angle: $\pm 270\mu\text{rad}$

Aperture parameters at 3.5 TeV

β^* from 10m to 2m (?)

Required half separation: $130\mu\text{rad}$ ($\sim 5\sigma$)

LHCb spectrometer angle: $\pm 270\mu\text{rad}$

External crossing angle: ?

Aperture parameters at 3.5 TeV

β^* from 10m to 2m (?)

Required half separation: $130\mu\text{rad}$ ($\sim 5\sigma$)

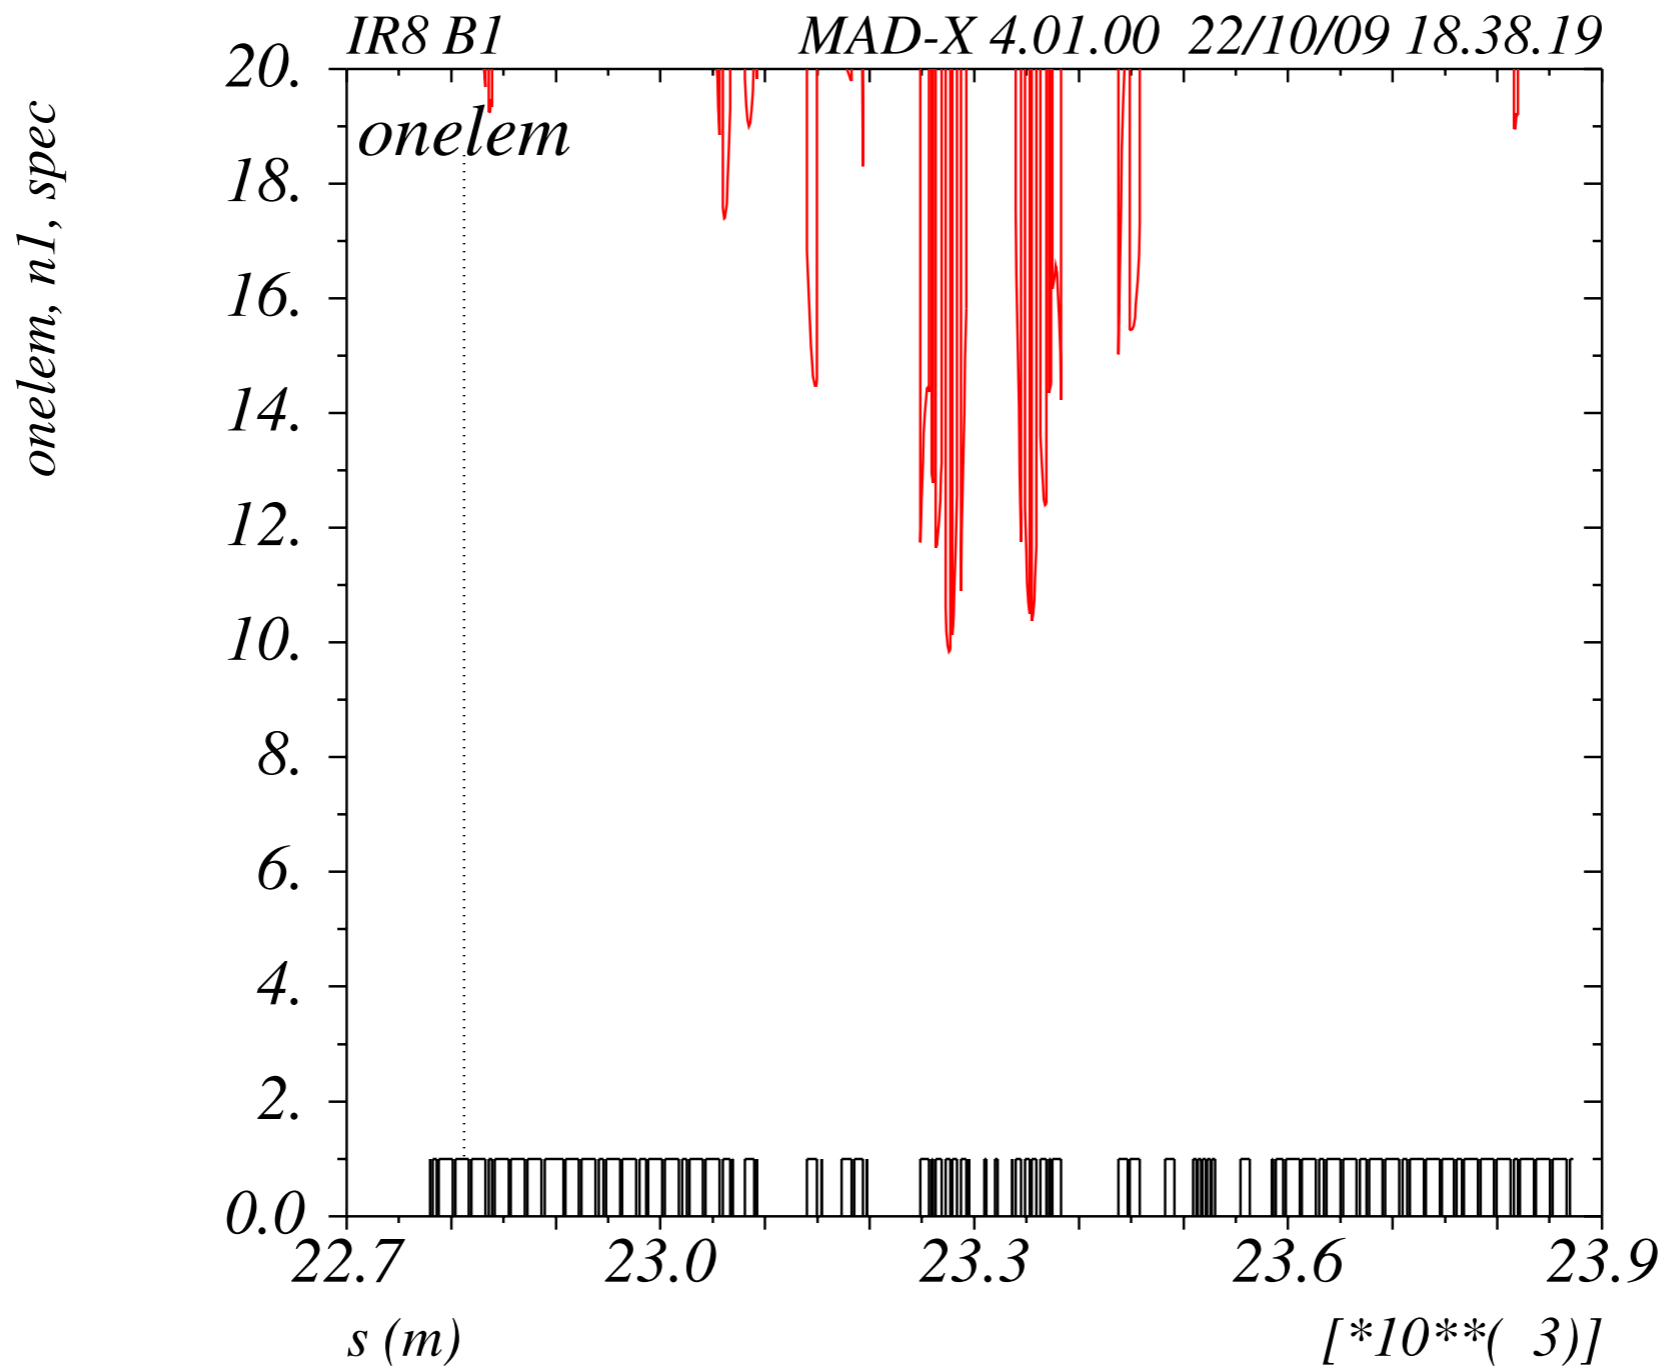

LHCb spectrometer angle: $\pm 270\mu\text{rad}$

External crossing angle: ?

Total crossing angle from ? + $270\mu\text{rad}$ to ? - $270\mu\text{rad}$

3.5 TeV, $\beta^* = 2$ m

No spectrometer

3.5 TeV, $\beta^* = 10$ m

Spectrometer with "bad" polarity

Aperture parameters at 3.5 TeV

β^* from 10m to 2m (?)

Required half separation: $130\mu\text{rad}$ ($\sim 5\sigma$)

LHCb spectrometer angle: $\pm 270\mu\text{rad}$

External crossing angle: ?

Final crossing angle from ? + $270\mu\text{rad}$ to ? - $270\mu\text{rad}$

Aperture parameters at 3.5 TeV

β^* from 10m to 2m (?)

Required half separation: $130\mu\text{rad}$ ($\sim 5\sigma$)

LHCb spectrometer angle: $\pm 270\mu\text{rad}$

External crossing angle: $130\mu\text{rad}$

Final crossing angle from ? + $270\mu\text{rad}$ to ~~? - $270\mu\text{rad}$~~
