

MARIC 23rd March

Presentations by Davide and Luca about MB fidu.

New baseline endorsed:

- a) Fresh magnets adjusted with 'itp20stat'
- b) 10% of fresh magnets can be adjusted to ITP20 (strategy of choice still to be defined by us)
- c) Old magnets adjusted to ITP20 if necessary (~100)

Luca reported to LTC last wed.

SF+BJ raised the issue of 10% b) maybe too small. Handicaped by slow rate of backload reduction → Action proposed by LTC, to be followed.
