Situation of MQTLs: performance and field quality

- MQTLs suffered from a number of issues:
 - Quench performance: already dealt with. A list of slot less demanding in terms of strength were prepared and given to AT-MEL. Coordination between AT-MEL and AT-MAS is required to define the correct assembly, i.e. appropriate MQTLs in the appropriate slot.
 - Field quality: already dealt with. An error table was provided by R. Wolf (based on mechanical tolerances) and tracking simulations were performed (see FQWG meeting held on 16/11/04).

Results of DA computation for FQWG on 16/11/04

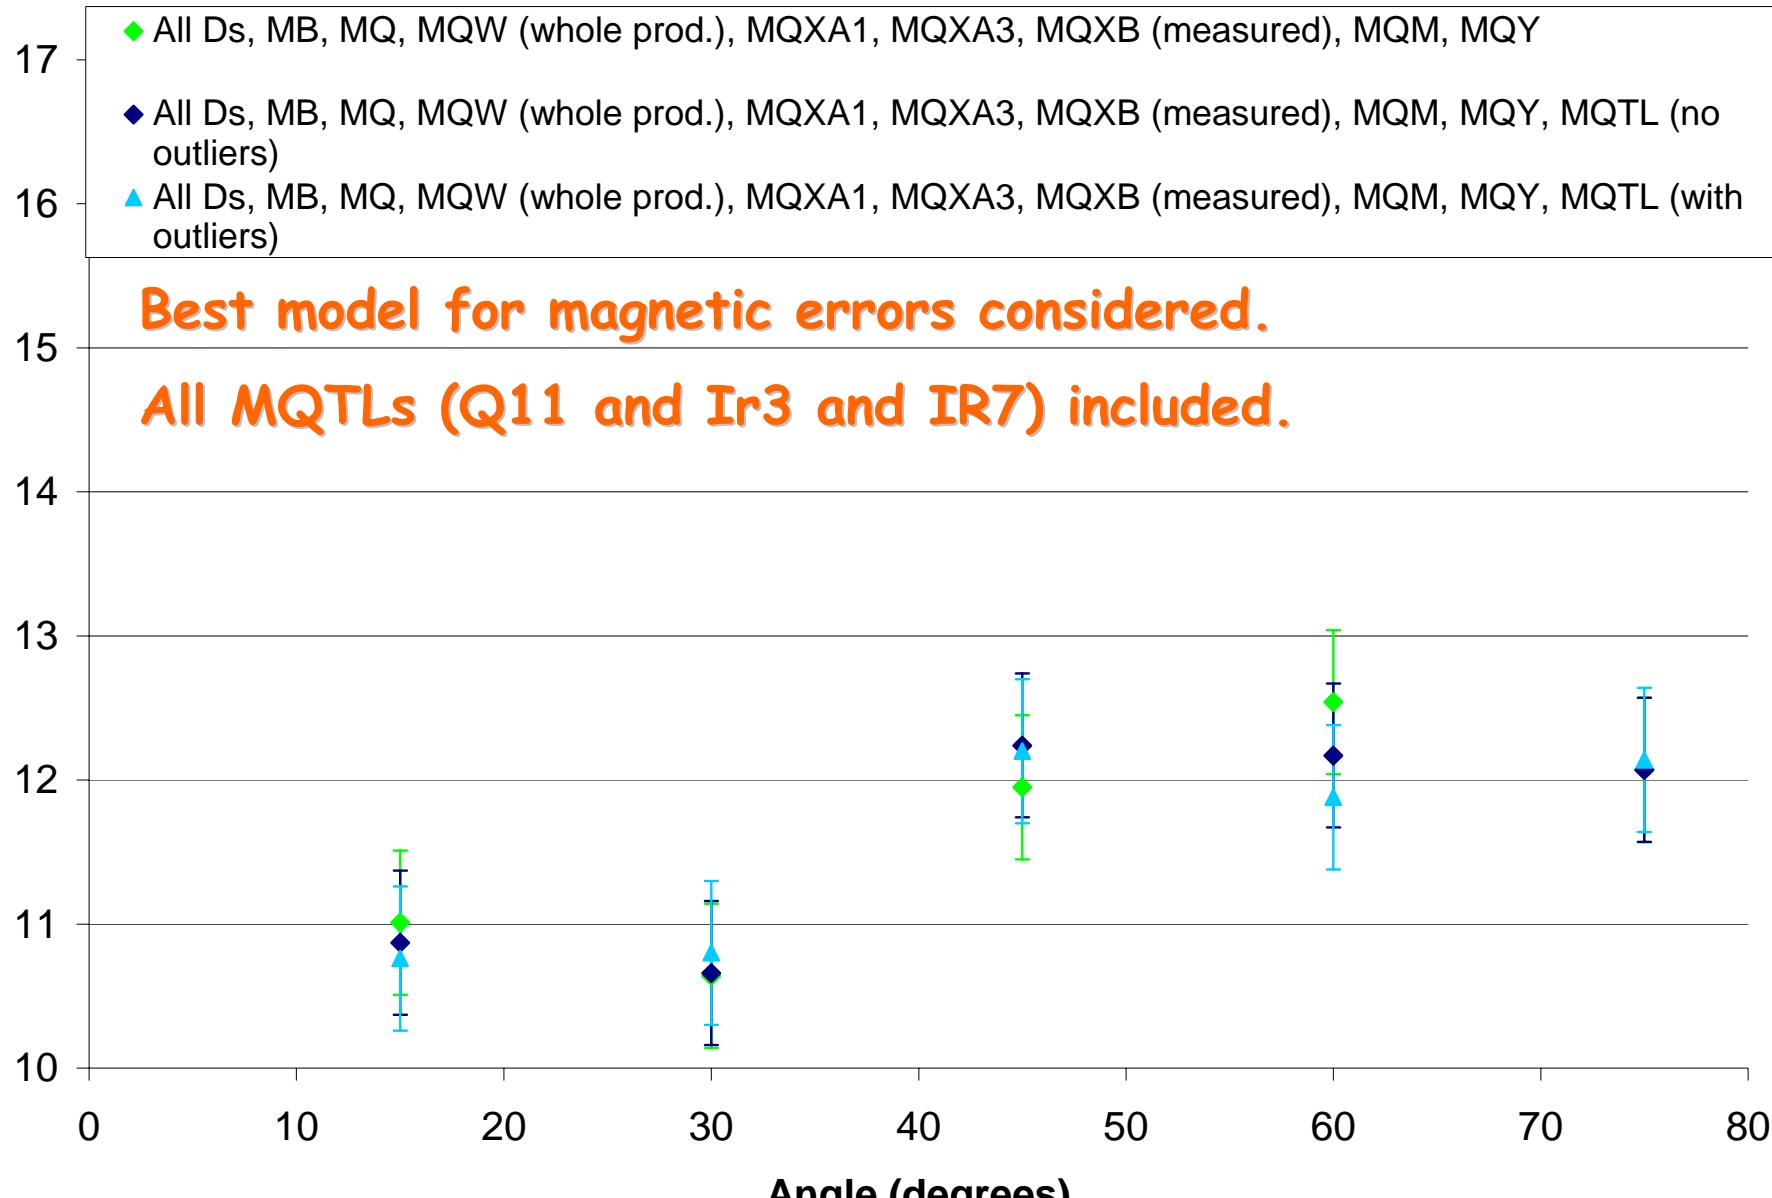

Recent news from the production

- The latest production showed some problematic modules in terms of field quality (b3, b4, a3, a4). A request was issued to analyse whether they can be accepted.
- Furthermore, it turned out that the target field quality used to qualify the magnets was the one specified for the MQTs.
- Following this finding a crash programme was launched to assess the impact of the actual field quality on the LHC DA.
- Two cases were considered:
 - FQ is deduced from the magnetic measurements at warm excluding the outliers.
 - FQ is deduced from the magnetic measurements at warm including also the outliers.

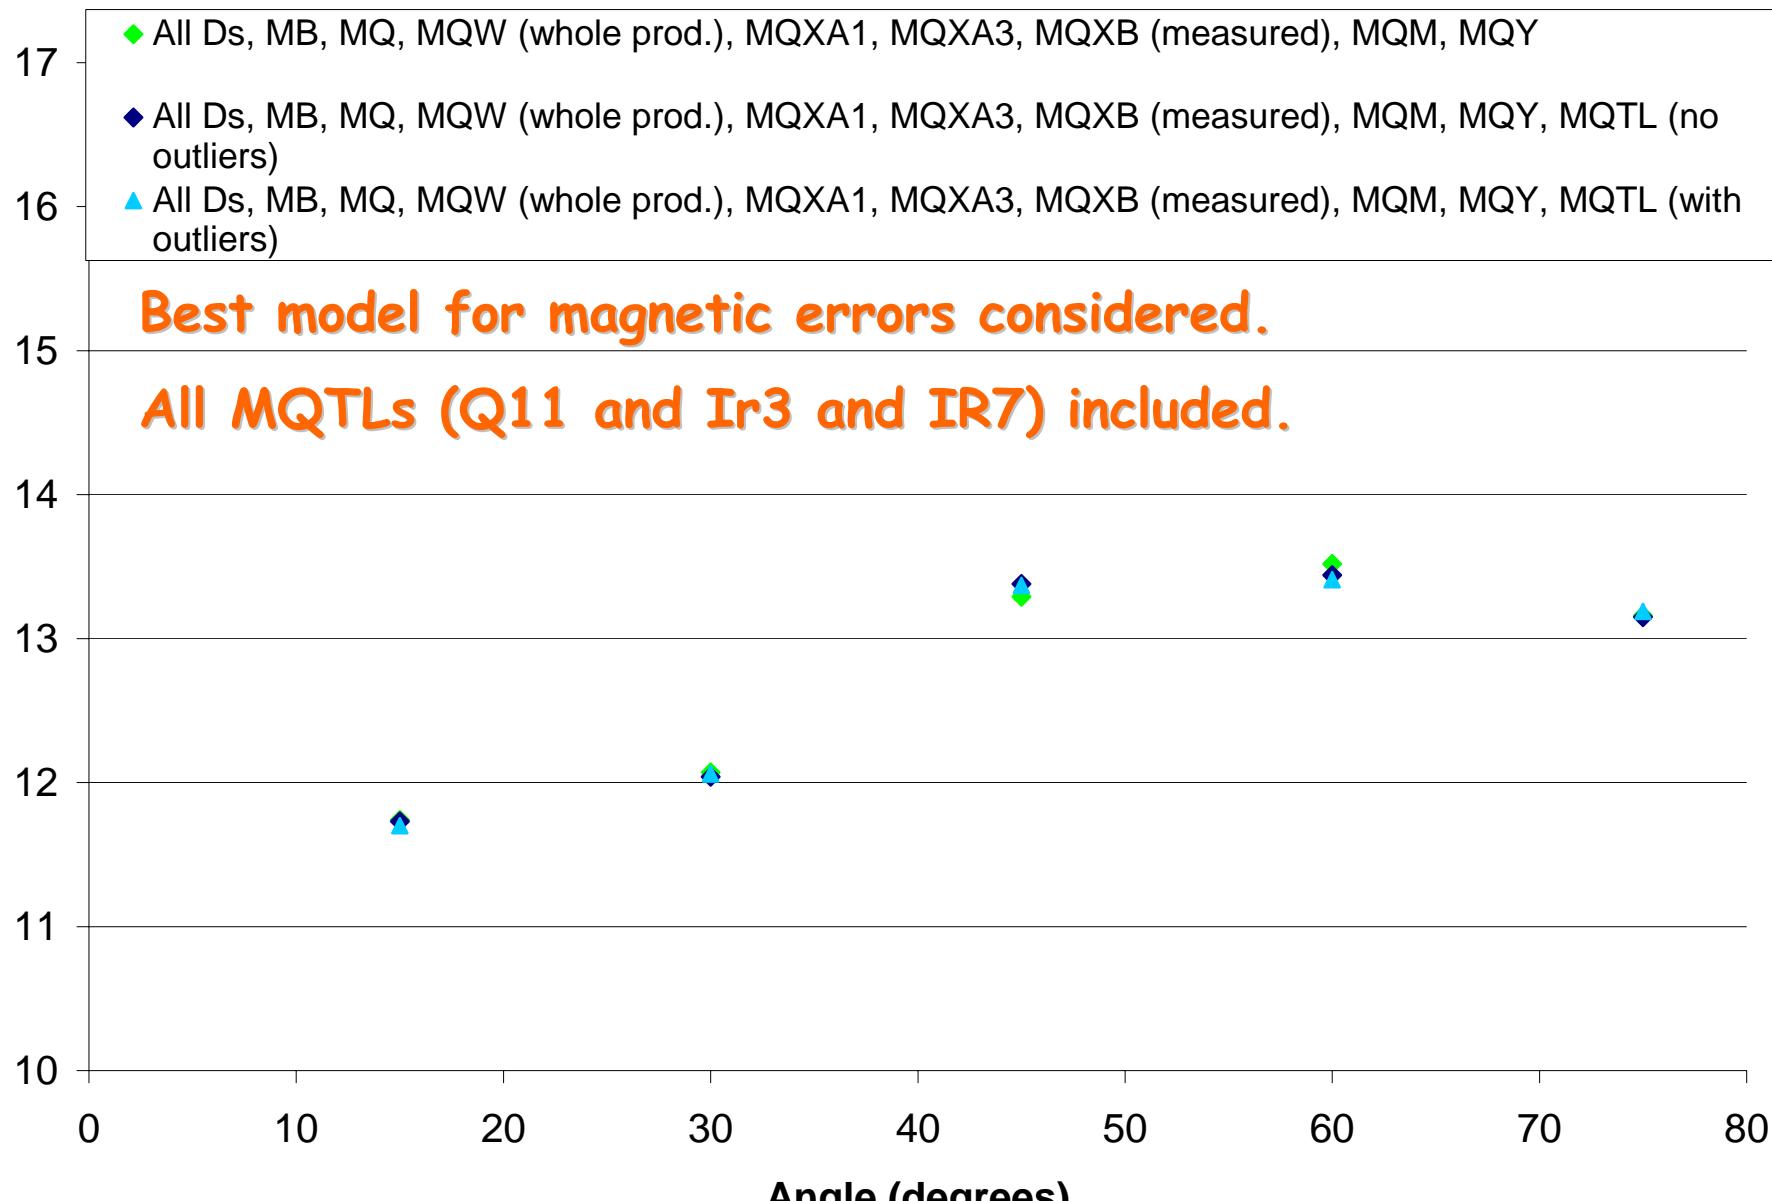

Field quality of MQTLs in DA computations

Results with measured field quality - I

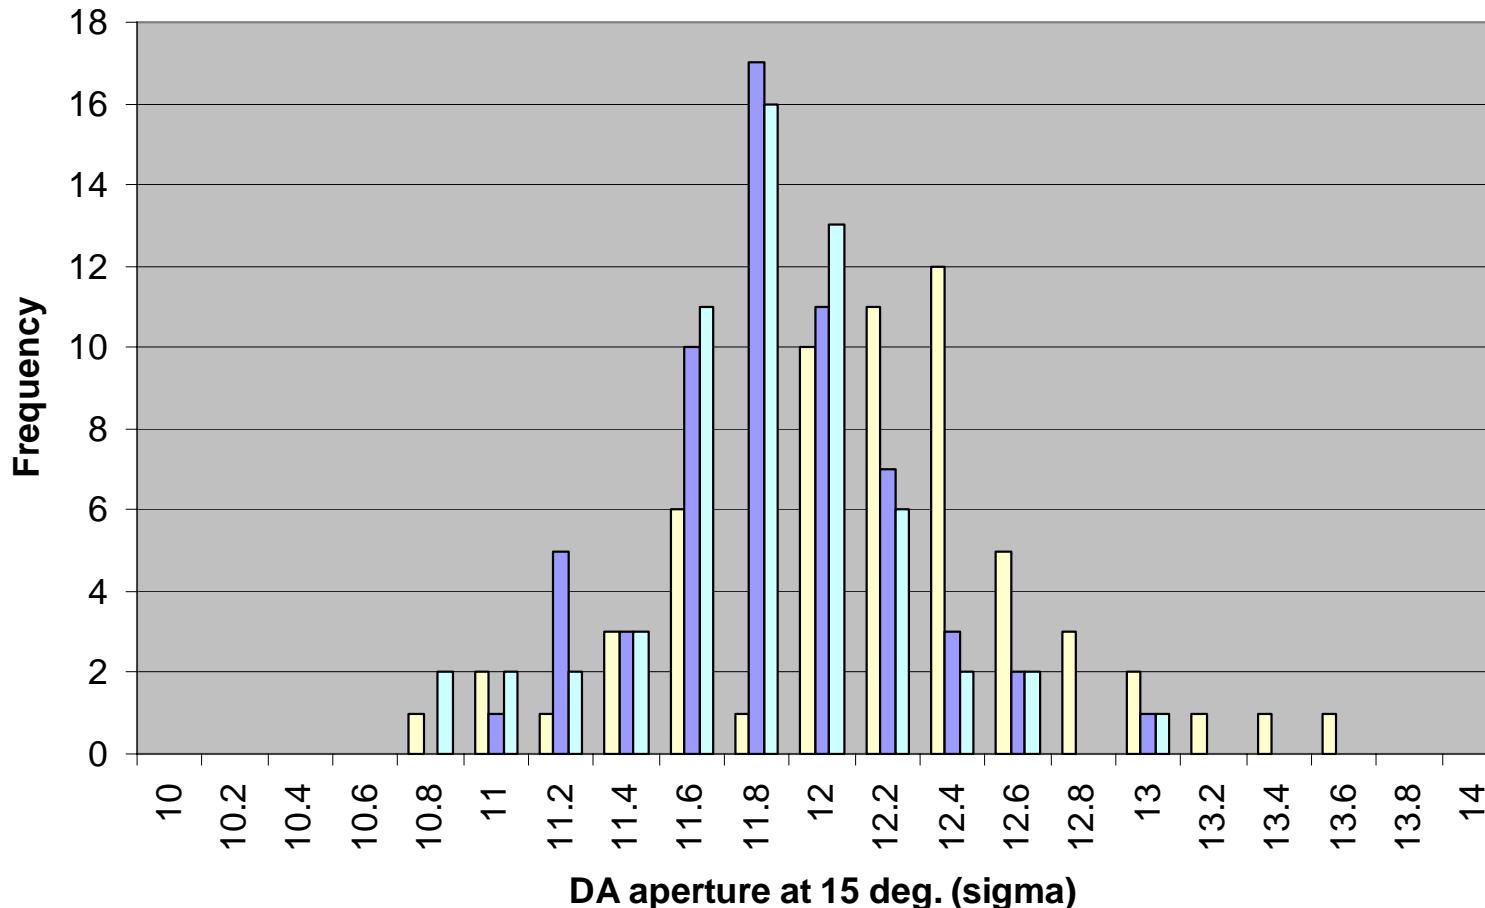

Results with measured field quality - II

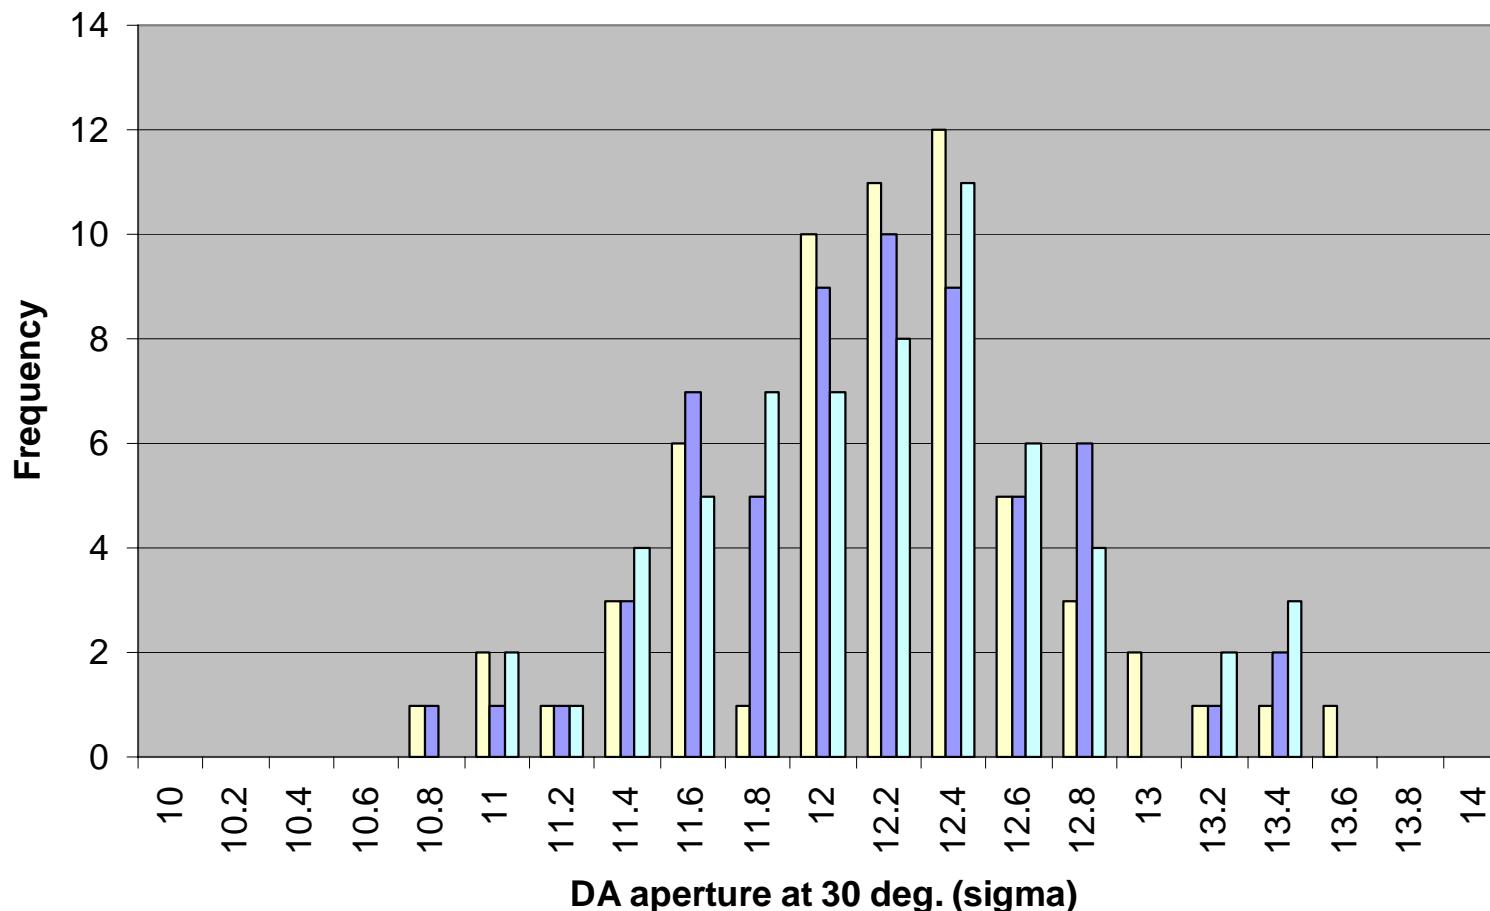

□ All Ds, MB, MQ, MQW (whole prod.), MQXA1, MQXA3, MQXB (measured), MQM, MQY

■ All Ds, MB, MQ, MQW (whole prod.), MQXA1, MQXA3, MQXB (measured), MQM, MQY, MQTL (no outliers)

□ All Ds, MB, MQ, MQW (whole prod.), MQXA1, MQXA3, MQXB (measured), MQM, MQY, MQTL (with outliers)

- All Ds, MB, MQ, MQW (whole prod.), MQXA1, MQXA3, MQXB (measured), MQM, MQY
- All Ds, MB, MQ, MQW (whole prod.), MQXA1, MQXA3, MQXB (measured), MQM, MQY, MQTL (no outliers)
- All Ds, MB, MQ, MQW (whole prod.), MQXA1, MQXA3, MQXB (measured), MQM, MQY, MQTL (with outliers)

Conclusions

- Results of preliminary DA computations indicates that the measured field quality of the MQTLs has a marginal impact.
- The outliers will be considered on a one-by-one basis.
- Additional studies are required to assess the impact of closed orbit (feed-down).
