

Collimation Phase 2 Project CERN

Project Leader (R. Assmann)

Project Engineer for tunnel & beamline activities (O. Aberle)

Project Engineer for coll. design, lab. tests, prototyping (A. Bertarelli)

LARP/SLAC Phase 2 Collimator Work

T. Markiewicz, SLAC

7 September 2009

EuCARD collaboration for collimators & materials (FP7)

R. Assmann (CERN), J. Stadtmann (GSI)

Install., maintenance, beam test support

O. Aberle (EN/STI)

Controls, Commiss-ioning, Operation

S. Redaelli (BE/OP)

Remote tools

K. Kershaw (EN/HE)

Tunnel and beamline activities (below surface)

Mechanical engineering, lab tests, prototyping, production

A. Bertarelli (EN/MME)

Final assembly on surface

O. Aberle (EN/STI)

Electronics, sensors, actuation

A. Masi (EN/STI)

Vacuum issues

M. Jimenez & V. Baglin (TE/VSC)

Dispersion suppressor changes

J.P. Tock (TE/MSC)

Coll. design, prototyping and production (above surface)

Beam instrumentation

B. Dehning (BE/BI)

Energy deposition

A. Ferrari (EN/STI)

Radiation aspects

S. Roesler (DG/SCR)

Machine protection & beam tests

R. Schmidt (TE/MTE)

Ion loss issues

J. Jowett (BE/ABP)

Commission-ing, simula-tions, beam tests

R. Assmann (BE/ABP)

Performance studies, simulations and beam tests

participate in collaborations

Crystal Collimation Tests at SPS & Tevatron

UA9: W. Scandale
T980: N. Mokhov

Note: Phase I collimation project still active until end of system commissioning. In practice integrated with Phase III!

List of Topics I

- R. Assmann: LHC Performance model with collimation (Cassandra's talk)
- R. Assmann & A. Rossi: Collimation settings at 3.5 TeV
- R. Assmann: How to measure cleaning efficiency?
- C. Bracco: Commissioning scenarios and availability of loss data
- C. Bracco: Top level analysis of collimator data
- C. Bracco: Collimation predictions for the phase I triplet upgrade
- E. Effinger: Possibilities for gating BLM signals and what will be available (bunched/unbunched halo)
- E. Effinger: Ideas and possibilities for halo measurements with high time resolution and additional devices
- I. Efthymiopoulos (tbc): Status and plans for HiRadMa
- B. Goddard et al (tbc): Requirements from beam dump and injection protection for collimation (interlock thresholds)

List of Topics II

- J. Jowett (tbc): Status of ion loss studies and collimation needs
- Y.I. Levinson: Simulation of beam-gas scattering in sixtrack and resulting loss maps
- L. Lari, FLUKA: FLUKA studies for phase 2
- T. Markiewicz & R. Assmann: Acceptance criteria for the SLAC phase II collimator prototype
- A. Nordt: View on BLM usage during collimator commissioning
- V. Previtali (tbc): SPS crystal predictions and data
- V. Previtali (tbc): Simulations of crystal-enhanced collimation for LHC
- **S. Redaelli: Final implementation of RBAC, discussion with inj and lbd teams**
- S. Redaelli: Machine protection procedure for collimators
- S. Roesler: Special collimation-related RP issues during startup
- **F. Roncarollo: TCL simulations**

List of Topics III

- A. Rossi: Status of unified sixtrack with collimation code
- A. Rossi: Status of collimation simulations for 3.5 TeV
- A. Rossi: Loss maps for background studies
- A. Rossi: Summary of MTF status
- C. Zamantzas: Status of fast BLM-based collimator positioning
- L. Tlustos: Medipix detector for the LHC?
- D. Wollmann: Access to collimator data in the database
- FLUKA: IR3 energy deposition
- FLUKA: Energy deposition with an imperfect LHC
- FLUKA: Energy deposition at intermediate energies
- FLUKA: Energy deposition with intermediate collimator settings
- FLUKA: Phase I triplet upgrade

List of Topics IV

- tbd: Plans for Phase 2 prototype tests with SPS beam
- tbd: SPS MD results and plans
- tbd: Status of off-momentum halo simulations
